## Comprehensive range on display

WHEN THE AWISA 2012 exhibition opens its doors on 11 July this year, one of the most comprehensive ranges of machinery for solid timber at the show will be the range presented by Advanced Timber Systems.

The company will be displaying the very latest machinery from Fullpower including a four side moulder, jet pulse dust extraction, tool grinders and much more. Now entering its second decade in Australasia, and with more than 500 machines sold, Fullpower is becoming a familiar sight in the

solid timber industry in all areas from small timber merchants and joineries right through to large sawmilling companies.

Tighter regulations for dust emissions require better filtration systems to be employed in dust extraction systems. The Fullpower Jet Pulse dust extraction

systems not only meet these stringent demands in a quiet efficient manner but also come equipped with a self cleaning jet pulse system to maintain a constant air velocity.

With ever increasing demands on tooling to not only offer a high grade finish but also longevity, diamond is becoming firmly entrenched in the woodworking industry. Along with a range of the traditional HSS and TCT knives, Advanced Timber Systems will be showcasing the latest in PCD technology. This tooling is increasing life expectancy in hardwood

flooring production from around 20,000 lineal metres when using TCT to more than 800,000 lineal metres in a single run. With setup costs now in the very affordable range Advanced Timber Systems can customise this latest technology to suit a client's exact requirements.

Advanced Timber Systems is located in Hall 4 at AWISA 2012, on stands 4113 - 4118. The company was established in 1996 to service the solid timber

industry and offers a full range of machinery and accessories to cover almost all facets of woodworking, but with the main focus on the solid timber industry. Advanced Timber Systems offers professional and personal service throughout Australia and surrounding countries including NZ, Fiji and PNG. The company specialises in moulders, four siders, band resaws, end matchers, fingerjoiners, optimising docking saws and grinders.

# Fullpower Processing Options

**FMD-609HX Heavy Duty Four Side Moulder 4 to 9 Spindle**

**AWEM-250 Fully Automatic End Matching Machine up to 300mm wide**

**SOC-100 Semi-Optimising Cut Off Saw up to 150m/min**
